CSD 4460	Educational Audiology	3 credits
total		13 credits

**If CSD 4417 is not taken during the Pre-Professional sequence, CSD 5517 (IET) is required at the graduate level.*

The Pre-Professional Certificate Program is for students with a BA, BS, or higher degree in fields unrelated to Communication Sciences and Disorders. The program consists of undergraduate courses required for graduate-level coursework. The above sequence will provide the foundational coursework necessary to enter the regular course sequence of the Doctor of Audiology (Au.D.) Program at Idaho State University.

An undergraduate course in statistics or experimental design is required if not taken as an undergraduate. This may also be taken as a graduate student elective.

A background in Sign Language is strongly encouraged. ISU does not currently offer Sign Language online. Students are encouraged to seek courses within their communities. There is not a specific course required, but basic sign language skills are beneficial to you as a communication professional.

Successful completion of the Pre-Professional Certificate Program does **NOT** ensure the student a seat in the Doctor of Audiology Program. Students must apply by February 1st of the year he/she would like to enter the Doctor of Audiology Program. Please visit our [website](#) for application instructions.
